Compatibility Directions

The program has been tested to run properly under the following operational systems: Windows XP Professional SP3, Windows 7 Professional SP7 and Windows 10 Home. Under Windows Vista Business SP2 and Windows 8.1 the program runs properly if the user right-clicks the file and then chooses "Run as Administrator". This happens because the program writes the results to a text file which opens to the local computer.

The program has, also, been tested to run properly on 32-bit and 64-bit machines.

The output window of the simulation requires a minimum display of 1050x855 pixels in order to be displayed without truncation. In smaller monitors the application displays vertical and/or horizontal scroll bars which enable the user to see the output window in parts.
